

Logo & assets

Mainline Studios (parent studio)

File	Description
assets/mainline-mark.svg	Icon only — white/light background
assets/mainline-lockup-dark.svg	Icon + MAINLINE STUDIOS wordmark on dark

Full usage, voice, and hierarchy: [MAINLINE_STUDIOS.md](#).

Pixel Place (product)

Paths below are for the **game / web app** identity (favicon, schema, game tiles).

PDF brand kit

Vector/raster specs in this folder are also published as **PDFs in pdf/** (logos embedded). Regenerate with `npm run brand-kit:pdf` from the repository root.

Canonical references in the repo

Asset	Typical path	Notes
Favicon / app icon	<code>public/logo.png</code>	Referenced in <code>app/layout.tsx</code> and <code>schema.org image</code>
Game / feature art	<code>public/images/games/</code>	SVG and PNG tiles per game
Cursors	<code>public/cursors/</code>	SVG pointers

If `logo.png` is not in your clone, generate or export from the master brand file and place it at `public/logo.png` for builds.

Export checklist (for design files)

Produce and store **outside this folder** (e.g. shared drive) or in `public/` only when shipping:

- ☐ **Logo** — PNG (transparent), square and horizontal lockups
- ☐ **Favicon** — 32×32, 192×192 (PWA), optional SVG
- ☐ **Social preview** — 1200×630 (Open Graph) with logo + short tagline
- ☐ **Wordmark** — "PIXEL" / "PLACE" stacked treatment matching login hero if applicable

Safe zone

Keep padding around the mark equal to at least **0.25×** the logo height on digital; more for print.

Color on logo

- Prefer **light mark on dark** for product UI.
- For print / light backgrounds, provide a **dark or single-color** variant.

This kit

The `brand-kit` folder intentionally **does not duplicate** large binaries. Add a `exports/` subfolder locally if you want to drop finalized PNG/SVG exports for the team — and add `exports/*` to `.gitignore` if those files must stay private.
